DETAILED ACTION

Response to Amendment

1. This office action is in response to the amendment filed 08/30/08. Claims 24, 28, 32, 36 and 40 have been amended; claim 46 has been added.

Response to Arguments

2. Applicant's arguments, see pages 7-8, with respect to the rejection(s) of claim(s) 28-35 under 35 USC 101 for being directed to non-statutory subject matter have been fully considered and are persuasive. Therefore, the rejection has been withdrawn.
3. Applicant's arguments, see pages 10-11, with respect to the rejection(s) of claim(s) 24-45 under 35 USC 103(a) as being obvious over Drew (6,477,645), Bari (2002/0023059) and Hanna (7,010,690) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5. Claims 24-46 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the

Art Unit: 2432

invention. Claim 24 recites the limitations “receiving an application identifier in a request for a server credential; generating the server credential using the application identifier and a master credential, wherein the master credential allows the device to be authenticated to other entities”. The specification discloses that these steps are performed by the credential server (paragraph 0031, steps 4-5). The specification also discloses that the master credential is a secret shared between a device and the credential server (paragraphs 0027, 0030). It is assumed that the credential server serves multiple devices, not a single device. Therefore, the credential server has different master credentials, one for each of the multiple devices. However, the specification does not disclose how the credential server can distinguish, based on the received application identifier, which device the application is running on in order to retrieve the correct master credential. Thus, the disclosure fails to enable one skilled in the art to make and use the claimed invention. Claims 28, 32, 36 and 40 are rejected on the same basis as claim 24.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Patent No. 6,668,327 to Prabandham et al.

U.S. Patent No. 5,987,232 to Tabuki

U.S. Patent No. 5,560,008 to Johnson et al.

U.S. Patent App. Publication No. 2004/0049588 to Shinohara et al.

Allowable Subject Matter

7. Subject to the above 112, 1st paragraph rejections, claims 24-46 would be allowable over the prior art of record.
